EDUCATION

Software Engineering, Bachelor, Atatürk University
September 2021 – present | Erzurum, Turkey

PROFILE

I am a Full Stack Web Developer with more than 2 years of experience building web applications using ReactJS. I am skilled in CSS frameworks such as Tailwind and Bootstrap and create modern, responsive user interfaces. In addition to personal projects, I have collaborated with teams and worked on freelance projects, constantly improving my development skills.

PROJECTS

Housing Management Website,

Atatürk University Lodging System 

2025 – 2025

Designed and developed a Housing Management Website for Atatürk University lodgings using ReactJS, Node.js, MySQL, and Ant Design. The platform allows users to view available housing, submit applications, and track lodging processes online. Focused on creating a user-friendly interface and an efficient backend system to simplify the housing management workflow.

E-commerce App, ReactJS Web App 

Built the frontend using ReactJS, with Bootstrap and Ant Design for responsive UI. Developed the backend with Node.js and used MongoDB for database management.

University Club Website,

Design and Development for University Club

2024

Designed a university club website using Figma and led front-end development with ReactJS. I contributed to back-end development and managed a team through Git for collaborative coding. I oversaw both design and development phases, ensuring effective teamwork and a cohesive final product.

Coffee Shop Application,

Frontend Development with ReactJS 

Developed a coffee shop application using ReactJS. Created a user-friendly interface to showcase products, manage orders, and provide a seamless customer experience.

PROFESSIONAL EXPERIENCE

TezBitti,

Full Stack Web Developer & Founder

January 2025 – present

I am the founder and full-stack developer of TezBitti, an AI-powered academic document correction platform. I managed the entire development process using ReactJS, Node.js, MySQL, Ant Design and Tailwind CSS. Additionally, I managed the branding, user experience and growth strategies of the platform.

TezBitti Tracker System,

Customer and Process Management Panel

2025 – 2025

Developed a custom tracking system for TezBitti to manage customer records, income/expense tracking, and thesis progress monitoring. The system includes dynamic dashboards, detailed customer profiles, and real-time status updates. Created using ReactJS, Node.js, and MySQL, this panel significantly improved internal workflow efficiency and financial tracking accuracy.

React Router Deployment Fix,

Resolving React Router Issues on GitHub Pages [↗](#)

Addressed and resolved routing issues encountered when deploying a React application with React Router on GitHub Pages

License Track System, University Software

Distribution & License Management Platform

2025 – 2025

I developed a comprehensive License Tracking and Software Distribution System for Atatürk University. The platform enables centralized management of academic software licenses, including version control, usage tracking, and automated expiry notifications. It provides role-based dashboards for administrators and users, supports license details such as invoice dates, pricing, and available seats, and allows operating system-specific distribution with JSON-based configuration.

This project was designed to increase transparency, reduce license misuse, and simplify software access for students and staff. It was built using a modern full-stack architecture (Laravel for backend, MySQL for relational data management, and Blade/React for frontend interfaces), with features like slug-based routes, notifications, and scalable database design.

ORGANIZATIONS

ATASENG Club, President

2022 – 2025 | Türkiye

I served as the President of the Ataseng Club, where I organized events, led team activities, and encouraged student involvement in engineering projects and social initiatives
